

Encyclopedia on Combustion Instability and Anomalies in Solid Propulsion Physics Writing Project (Solid and Electronic Versions)

Project Coordinator: Dr. Alexander N. Lukin E-Mail: APISCEU@bk.ru

Motivations and Objectives

The evolutionary history of solid propulsion physics reflects to some extent the history of the investigation of unstable combustion and methods for its prevention and restriction.

The problem of combustion instability and anomalies of burning of the energetic materials traditionally remains one of actual problems in the modern theory of combustion.

The aim of preparation of the Encyclopedia is to provide objective analysis of the state-of-the-art of research in the field of combustion instability and anomalies connected with solid propulsion physics as well as to determine the most perspective directions of researches in this field and to plan further prospects of researches in the solid propulsion physics.

Tentative List of Authors

N⁰	Name	Institution	City, Country
1	Prof. Abrukov V.S.	Chuvash State University,	Cheboksary,
